From the Board of Supervisors...

During our 2019 budget preparation, we solicited input from both professional staff and residents to assemble a capital projects plan for 2019. Below is a list of the prominent projects you can expect this year.

2019 Township Road Program (Roads to be repaved)

- **Hidden Pond** - Long Pond Drive between Valley View and Windsor, East & West Fernbrook, Windsor, Cedar, Marielle, Blossom, and Apple Court

- **Sugarbottom Road**

Streetlight Refurbishing Project

Since many of our streetlights were installed in the 1980's and 1990's and are now showing their age, the township has started a streetlight refurbishing project. The project consists of replacing streetlight posts, repainting fixtures, replacing glass, and upgrading to LED technology. Before and after pictures at right:

Comprehensive Plan Update

A comprehensive plan is the township's vision for the future. It acts as a guide in shaping future development, and amending Zoning and 'Subdivision and Land Development' Ordinances. Importantly, a current plan is required for the township to apply for certain state and federal grants. For example, a list of recently awarded grants are below:

• **Grants awarded in 2017/2018:**

Headquarters Trail (TAP) Grant:	\$500,000
Memorial Park (DCNR) Grant:	\$374,000
Memorial Park (DCED) Grant:	\$50,000
Municipal Bridge (DVRPC) Grant:	\$322,247
TOTAL:	\$1,246,247

Township Building Improvements

Township Building Parking Lot Repaving
Partial Replacement of HVAC system

Police Department Patrol Room Renovation
Public Works Department Office Renovation

Township Park Improvements

Hockey Court Repairs (Community Park)
Basketball Court Repairs (Hidden Pond Park)

Construction of Headquarters Trail

Through the use of a \$500,000 Transportation Alternatives Grant, the township will be putting the Headquarters Trail project to bid in 2019. This project involves connecting the Moland House to the new Memorial Park with a 1,500 foot trail and bridge.

Scheduling Building Code Inspections

Brandy Mckeever, Director of Planning and Zoning

When scheduling inspections for building permits, it is important for the property owner to be aware of the date and time of the inspection. The contractor often does the scheduling so be sure you are informed of when inspections are occurring. At the time of inspection, someone will need to be on site to grant access to the property, otherwise the owner must provide authorization for access in advance. Authorization from the property owner can be provided in writing or within an e-mail. Should a property be unattended, and no prior authorization granted, a re-inspection fee will be charged. Re-inspection fees are required to be paid prior to rescheduling. Should you have any questions contact Warwick Township at 215-343-6100.

Tips for Residential Heating Oil Tank Owners *By Ed Pfeiffer, Fire Marshal*

Residential heating oil tanks are tanks that store fuel oil to provide space heating on the premises where they are located. With proper tank management, spills and leaks, can be avoided. Leaking tanks can contaminate public and private drinking water supplies, pollute soils, create the potential for fires and explosions, and subject tank owners to very expensive cleanup costs. A typical cleanup cost for spills and overfills from heating oil tanks ranges from \$10,000 to \$50,000 and is often not covered by typical homeowner's insurance policies.

Install spill and overfill protection devices.

Spills and overfills occur when product is delivered to the tank. There are simple and generally inexpensive devices that can be installed on tanks to prevent this from occurring. The product distributor can advise the tank owner about available devices.

Ensure the tank address is clearly visible and the fill line is clearly marked.

This is extremely important for multi-family dwellings and in areas where dwellings are located close together. Many spills and overfills have resulted from deliveries made to the wrong tank. It is important to remove the fill pipe when a tank is removed. There are numerous documented cases of heating oil being delivered through fill pipes for basement tanks that no longer exist. Some simple steps to avoid this costly mistake include: 1) Remove the fill line after the removal of the tank; 2) If the fill line cannot be removed, then permanently seal both ends of the fill pipe; 3) Contact the oil delivery company and inform them that the tank has been removed and that under no circumstances should a delivery be made to the tank.

Consider a secondary containment structure.

If a release from the tank does occur, the easiest way to limit the liability is to capture and contain the entire release before it enters the environment. Double-walled underground tanks, diked aboveground tanks, and retrofit structures for existing aboveground tanks are readily available. A product distributor can advise tank owners on various options.

How can heating oil tanks be protected from spills and overfills?

Routinely inspect the exterior of an aboveground tank and all attached equipment.

Many times, leaks can easily be detected and corrected before extensive environmental damage occurs. Tanks and equipment should be inspected for uniform corrosion, pitting, holes, leaking pipes, loose joints, and loose fittings. Be aware that most corrosion failures occur from water sitting at the bottom of the tank. Tanks rust from the inside out. A freshly painted tank doesn't mean that it is structurally sound!

Tanks can collapse when the tank legs rust or when the soil underneath settles due to the freezing and thawing cycle. To prevent collapses, tanks and equipment should be frequently inspected for structural soundness, such as weak or unsteady support legs. Tanks should be installed on a concrete pad and be secured with floor flanges and concrete anchors. Never place an aboveground tank directly on the soil. Remember, a 275-gallon tank full of heating oil weighs over one ton. Tanks need to be installed in a secure area, away from vehicular traffic, and be protected from high winds and any potential falling objects such as tree limbs, snow, ice, etc., that could damage the tank or break the attached equipment.

WARWICK TOWNSHIP PUBLIC WORKS DEPARTMENT

Manhole Protection Rings Applied to Township Roads

Manhole covers that do not match the exact grade and crown of the road are more than a nuisance. Exposed manhole risers can pose a real danger to motorists, pedestrians, and are maintenance concerns for snowplows. It is also a potential injury hazard for plow operators.

Public Works employees have been applying a manhole protection ring system to Township roads to safely transition from the road surface to the top of the manhole cover or water access cover. The system is designed with a subtle incline that provides a smooth, damage-free ride for daily traffic.

PLAYGROUND SAFETY

A quick checklist for parents

Place this list in a prominent area of your home for quick reference. Then, before your children head out the door for the playground, check that:

☐ **Supervision is present, but strings and ropes aren't.**

Adult presence is needed to watch for potential hazards, observe, intercede and facilitate play when necessary. Strings on clothing or ropes used for play can cause accidental strangulation if caught on equipment.

☐ **All children play on age-appropriate equipment.**

Preschoolers, ages 2-5, and children ages 5-12, are developmentally different and need different equipment located in separate areas to keep the playground safe and fun for all.

☐ **Falls to surface are cushioned.**

Nearly 70 percent of all playground injuries are related to falls to the surface. Acceptable surfaces include hardwood fiber/mulch, pea gravel, sand and synthetic materials such as poured-in-place, rubber mats or tiles. Playgrounds surfaces should not be concrete, asphalt, grass, blacktop, packed dirt or rocks.

☐ **Equipment is safe.**

Check to make sure the equipment is anchored safely in the ground, all equipment pieces are in good working order, S-hooks are entirely closed, bolts are not protruding, there are no exposed footings, etc.

Checklist is from the National Program for Playground Safety (NPPS) at www.uni.edu/playground/

Soccer Stars 1

It’s never too early to develop a child’s love of soccer and athletics. Our Soccer Starters program is the perfect introduction to soccer basics, promoting physical fitness, creating a positive attitude, developing coordination, and sportsmanship. Instructor ratios are kept small to ensure each child gets the much needed individual attention. We know the importance of first getting kids interested and motivated before they are able to absorb the necessary lessons. Thematic games and fun exercises are designed to inspire and challenge young players, but also allow them to meet with successes that keep them interested in learning more. Learning the fundamentals, and developing a love for the game starts here. Kids that start with us have a real advantage as they mature. We believe it is our duty and privilege to get your kids started off right and develop a passion for the game that will last a lifetime. Parent must remain on-site for duration of program.

**Apprentice Engineering of Medieval Times** **NEW**

In medieval times, there were a huge number of engineering innovations. Crossbows, drawbridges, towers, cranes, the compass, and more were invented during those times. The lands then were ruled by feudal courts in a castle, with each castle having a great deal of land around it that was ruled by the lords and ladies of the castle. Because owning land meant more power, many lords and ladies went to battle with other lords and ladies, trying to take their castle and control their land. This led to many incredible devices being engineered, such as catapults. Students will split into groups forming their own feudal courts of lords and ladies. They will try to beat out the other teams in various challenges to show their prowess and be crowned king and queens of the land with the Engineering for Kids Crown.
