

Bucks County Has a New Program to Keep Your Children Lead-Safe

The Lead-Based Paint Hazard Reduction Program is completely free for qualified low-moderate income Bucks residents.

Homeowners, landlords, and tenants are all eligible to apply.

The program provides a free lead inspection and risk assessment of your home. If hazards are found, home improvements such as new windows, doors, siding, trim, interior & exterior painting, porch repair, and other home safety measures are provided for free.

Visit our website

www.buckscounty.org/buckslead to see if you qualify for this free program to give your child the chance of a lifetime.

Lead paint is an invisible danger. Here are some facts about lead paint poisoning that everyone should know:

- * Lead paint is still present in millions of homes, sometimes under layers of newer paint.
- * Lead paint poisoning affects millions of children with some level of irreversible damage, such as lower intelligence, learning disabilities and behavioral issues.
- * It's not just lead paint chips that poison. Contamination can be caused by only a little bit of lead dust that is easily absorbed by anyone who inhales or ingests it.
- * The damage caused by lead paint is permanent and can never be reversed.

Call 215-345-3842

Childhood lead poisoning is a major environmental health problem in the U.S

Children under the age of 6 are most at risk of becoming lead poisoned because of how quickly their brains are developing.

Where does lead poisoning come from?

- * Before 1978, most paints used in houses and apartments, inside and out, contained lead.

People can get lead into their body if they:

- * Put their hands or other objects covered with lead dust in their mouths.
- * Eat paint chips or soil that contain lead
- * Breathe in lead dust

Children are more likely to be affected by lead dust because they are more likely to put their hands or other objects in their mouths.

Email: hcd@buckscounty.org

Even low levels of lead in children can cause:

- * Speech, language, and behavior problems
- * Brain damage
- * Developmental delays
- * Hearing Problems
- * Anemia
- * Nervous system and kidney damage
- * Learning disabilities, attention-deficit disorder, and decreased intelligence
- * Decreased muscle and bone growth
- * Seizures
- * Constipation, abdominal pain, vomiting
- * Weight loss, loss of appetite

Elevated Blood Lead Levels are associated with delinquency and increased school drop-out rates.

In rare cases, ingestion of lead can cause seizures, coma and even death.
